## Description

Used in lumber and planing mills to keep blades clean and free of sap. Extends blade cutting life, reduces down time and helps to prevent bounce marks in planing mills.

Available in 16 oz bottles only or cases of 13, 16 oz. Contains NO VOC's

Money back guarantee if your operational expenses are not reduced by at least 2 fold to cost of the product.

The image shows the product label for Maxiglide Formula A. On the left, there is a graphic of a saw blade with the text "FOR CLEANER FASTER PLANING & CUTTING" and "MAXIGLIDE™ INDUSTRIAL WOODWORKER'S COATING". Below this, it says "Maxiglide Formula A For Sawmills & Planing Mills" and "Professional Size 16 fluid oz. (473.6 ml)". On the right, there is a block of text describing the product's benefits and usage instructions.

**Maxiglide Formula A is the finest coating made for use in industrial sawmill and planing mill operations. Maxiglide Formula A will prevent the sticky build-up of resins and wood sap that causes blade binding or bouncing on wood surfaces.**

**Use of Maxiglide Formula A will greatly decrease equipment down time and increase productivity of equipment and man power. Maxiglide Formula A users experience an increase in time between equipment cleanings of 10x or more. Blades will also stay sharp longer and because your machinery will be under less stress, your machinery will last longer.**

**DIRECTIONS**

SHAKE WELL before using.

Blades and Surfaces should be clean, dry and free of old wax & acetone cleaning agents. (Acetone is destructive to Maxiglide.)

Wipe on with clean cloth or sprayer. Use sparingly. Buff until dry to the touch.

Re-apply when blades lose their shine or begins to foul or cutting quality begins to diminish. Continued use will eliminate the need for cleaning equipment surfaces. Simply re-apply Maxiglide Formula A. Durability will increase with each use.

**Not to be used with wax or other coatings.**
